

# **Assignment: Notebook for Peer Assignment**

Estimated time needed: 45 minutes

# **Assignment Scenario**

Congratulations! You have just been hired by a US Venture Capital firm as a data analyst.

The company is considering foreign grain markets to help meet its supply chain requirements for its recent investments in the microbrewery and microdistillery industry, which is involved with the production and distribution of craft beers and spirits.

Your first task is to provide a high level analysis of crop production in Canada. Your stakeholders want to understand the current and historical performance of certain crop types in terms of supply and price volatility. For now they are mainly interested in a macro-view of Canada's crop farming industry, and how it relates to the relative value of the Canadian and US dollars.

# Introduction

Using this R notebook you will:

- 1. Understand four datasets
- 2. Load the datasets into four separate tables in a Db2 database
- 3. Execute SQL queries unsing the RODBC R package to answer assignment questions

You have already encountered two of these datasets in the previous practice lab. You will be able to reuse much of the work you did there to prepare your database tables for executing SQL queries.

## **Understand the datasets**

To complete the assignment problems in this notebook you will be using subsetted snapshots of two datasets from Statistics Canada, and one from the Bank of Canada. The links to the prepared datasets are provided in the next section; the interested student can explore the landing pages for the source datasets as follows:

- Canadian Principal Crops (Data & Metadata) (https://www150.statcan.gc.ca/t1/tbl1/en/tv.action? utm\_medium=Exinfluencer&utm\_source=Exinfluencer&utm\_content=000026UJ&utm\_term=10006555&utm\_ic SkillsNetwork-Channel-SkillsNetworkCoursesIBMRP0203ENSkillsNetwork23863830-2021-01-01&pid=3210035901)
- Farm product prices (Data & Metadata) (https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?
   utm\_medium=Exinfluencer&utm\_source=Exinfluencer&utm\_content=000026UJ&utm\_term=10006555&utm\_ic
   SkillsNetwork-Channel-SkillsNetworkCoursesIBMRP0203ENSkillsNetwork23863830-2021-01 01&pid=3210007701)
- 3. <u>Bank of Canada daily average exchange rates (https://www.bankofcanada.ca/rates/exchange/daily-exchange-rates?</u>
  <u>utm\_medium=Exinfluencer&utm\_source=Exinfluencer&utm\_content=000026UJ&utm\_term=10006555&utm\_icSkillsNetwork-Channel-SkillsNetworkCoursesIBMRP0203ENSkillsNetwork23863830-2021-01-01)</u>

### 1. Canadian Principal Crops Data \*

This dataset contains agricultural production measures for the principle crops grown in Canada, including a breakdown by province and teritory, for each year from 1908 to 2020.

For this assignment you will use a preprocessed snapshot of this dataset (see below).

A detailed description of this dataset can be obtained from the StatsCan Data Portal at:

https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=3210035901

(https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?

<u>utm\_medium=Exinfluencer&utm\_source=Exinfluencer&utm\_content=000026UJ&utm\_term=10006555&utm\_id=NASkillsNetwork-Channel-SkillsNetworkCoursesIBMRP0203ENSkillsNetwork23863830-2021-01-</u>

<u>01&pid=3210035901</u>)\ Detailed information is included in the metadata file and as header text in the data file, which can be downloaded - look for the 'download options' link.

### 2. Farm product prices

This dataset contains monthly average farm product prices for Canadian crops and livestock by province and teritory, from 1980 to 2020 (or 'last year', whichever is greatest).

For this assignment you will use a preprocessed snapshot of this dataset (see below).

A description of this dataset can be obtained from the StatsCan Data Portal at:

https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?pid=3210007701

(https://www150.statcan.gc.ca/t1/tbl1/en/tv.action?

<u>utm\_medium=Exinfluencer&utm\_source=Exinfluencer&utm\_content=000026UJ&utm\_term=10006555&utm\_id=NASkillsNetwork-Channel-SkillsNetworkCoursesIBMRP0203ENSkillsNetwork23863830-2021-01-</u>

<u>01&pid=3210007701</u>) The information is included in the metadata file, which can be downloaded - look for the 'download options' link.

### 3. Bank of Canada daily average exchange rates \*

This dataset contains the daily average exchange rates for multiple foreign currencies. Exchange rates are expressed as 1 unit of the foreign currency converted into Canadian dollars. It includes only the latest four years of data, and the rates are published once each business day by 16:30 ET.

For this assignment you will use a snapshot of this dataset with only the USD-CAD exchange rates included (see next section). We have also prepared a monthly averaged version which you will be using below.

A brief description of this dataset and the original dataset can be obtained from the Bank of Canada Data Portal at: <a href="https://www.bankofcanada.ca/rates/exchange/daily-exchange-rates/">https://www.bankofcanada.ca/rates/exchange/daily-exchange-rates/</a>
<a href="https://www.bankofcanada.ca/rates/exchange/daily-exchange-rates/?">https://www.bankofcanada.ca/rates/exchange/daily-exchange-rates/?</a>
<a href="https://www.bankofcanada.ca/rates/exchange-rates/">https://www.bankofcanada.ca/rates/exchange/daily-exchange-rates/?</a>
<a href="https://www.bankofcanada.ca/rates/exchange-rates/">https://www.bankofcanada.ca/rates/exchange-rates/?</a>
<a href="https://www.bankofcanada.ca/rates/exchange-rates/">https://www.bankofcanada.ca/rates/exchange-rates/?</a>
<a href="https://www.bankofcanada.ca/rates/exchange-rates/">https://www.bankofcanada.ca/rates/exchange-rates/</a>
<a href="https://www.bankofcanada.ca/rates/exchange-rates/">https://www.bankofcanada.ca/rates/exchange-rates/</a>
<a href="https://www.bankofca

( \* these datasets are the same as the ones you used in the practice lab)

#### **Dataset URLs**

- 1. Annual Crop Data: <a href="https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Annual\_Crop\_Data.csv">https://cf-courses-data.s3.us.cloud-object-SkillsNetwork/labs/Final%20Project/Annual\_Crop\_Data.csv</a> (<a href="https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Annual\_Crop\_Data.csv">https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Annual\_Crop\_Data.csv</a> (<a href="https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Annual\_Crop\_Data.csv">https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Annual\_Crop\_Data.csv</a> (<a href="https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Annual\_Crop\_Data.csv">https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Annual\_Crop\_Data.csv</a>)
- 2. Farm product prices: <a href="https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Monthly\_Farm\_Prices.csv">https://cf-courses-data.s3.us.cloud-object-Storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Monthly\_Farm\_Prices.csv</a>)
- 3. Daily FX Data: <a href="https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Daily\_FX.csv">https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Daily\_FX.csv</a>)
- 4. Monthly FX Data: <a href="https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Monthly\_FX.csv">https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBM-RP0203EN-SkillsNetwork/labs/Final%20Project/Monthly\_FX.csv</a>)

\*\*IMPORTANT:\*\* You will be loading these datasets directly into R data frames from these URLs instead of from the StatsCan and Bank of Canada portals. The versions provided at these URLs are simplified and subsetted versions of the original datasets.

Now let's load these datasets into four separate Db2 tables.

Let's first load the RODBC package:

```
In [2]: install.packages("RODBC")
library(RODBC)

Updating HTML index of packages in '.Library'
Making 'packages.html' ... done
```

#### **Create tables**

Establish a connection to the Db2 database, and create the following four tables using the RODBC package in R. Use the separate cells provided below to create each of your tables.

- 1. CROP\_DATA
- 2. FARM\_PRICES
- 3. **DAILY\_FX**
- 4. MONTHLY\_FX

The previous practice lab will help you accomplish this.

```
In [6]: # Establish database connection
         dsn_driver <- "{IBM DB2 ODBC Driver}"</pre>
         dsn database <- "bludb" # e.g. "bludb"
         dsn hostname <- "dashdb-txn-sbox-yp-dal09-08.services.dal.bluemix.net" # e.q
         →"54a2f15b-5c0f-46df-8954-.databases.appdomain.cloud"
         dsn port <- "50001" # e.g. "32733"
         dsn protocol <- "TCPIP" # i.e. "TCPIP"</pre>
         dsn_uid <- "stm14075" # e.q. "zjh17769"
         dsn pwd <- "nxmfkzmdsc+n2kmr" # e.g. "zcwd4+8qbq9bm5k4"
         dsn security <- "ssl"
         conn_path <- paste("DRIVER=",dsn_driver,</pre>
         ";DATABASE=",dsn_database,
         ";HOSTNAME=",dsn_hostname,
         ";PORT=",dsn_port,
         ";PROTOCOL=",dsn_protocol,
         ";UID=",dsn_uid,
         ";PWD=",dsn_pwd,
         ";SECURITY=",dsn_security,
         conn <- odbcDriverConnect(conn path, believeNRows=FALSE)</pre>
         conn
```

Warning message in odbcDriverConnect(conn\_path, believeNRows = FALSE):

"[RODBC] ERROR: state 08001, code -30081, message [IBM][CLI Driver] SQL30081N

## Now execute SQL queries using the RODBC R package to solve the assignment problems.

#### **Problem 3**

How many records are in the farm prices dataset?

#### Solution 3

## **Problem 4**

Which geographies are included in the farm prices dataset?

#### Solution 4

```
In [15]: unique_farm_prices_geographies_query <- query <- paste("select DISTINCT (GEO)
    FROM FARM_PRICES;")
    unique_farm_prices_geographies_df <-sqlQuery(conn,unique_farm_prices_geographi
    es_query)
    unique_farm_prices_geographies_df
    #The geographies included in the farm prices dataset are Alberta and Saskatche
    wan.

Error in sqlQuery(conn, unique_farm_prices_geographies_query): first argument
    is not an open RODBC channel
    Traceback:

1. sqlQuery(conn, unique_farm_prices_geographies_query)</pre>
```

2. stop("first argument is not an open RODBC channel")

How many hectares of Rye were harvested in Canada in 1968?

#### Solution 5

```
In [16]: d <-"SELECT sum(harvestedArea) FROM CROP_DATA WHERE YEAR LIKE '1968%';"
    v<-sqlQuery(conn,d)
    head(v)

Error in sqlQuery(conn, d): first argument is not an open RODBC channel
    Traceback:
    1. sqlQuery(conn, d)
    2. stop("first argument is not an open RODBC channel")</pre>
```

### **Problem 6**

Query and display the first 6 rows of the farm prices table for Rye.

#### Solution 6

```
In [17]: farm_prices_df<-''
    farm_prices_query <- query <- "SELECT * FROM FARM_PRICES WHERE CROP_TYPE = 'Ry
    e';"
    farm_prices_df<-sqlQuery(conn,farm_prices_query)
    head(farm_prices_df)

Error in sqlQuery(conn, farm_prices_query): first argument is not an open ROD
    BC channel
    Traceback:

1. sqlQuery(conn, farm_prices_query)
    2. stop("first argument is not an open RODBC channel")</pre>
```

### **Problem 7**

Which provinces grew Barley?

```
In [18]: barley_query<-"SELECT DISTINCT(GEO) FROM CROP_DATA WHERE croptype = 'BARLEY';"
barley_df<-sqlQuery(conn, barley_query)
barley_df

#Alberta, Saskatchewan

Error in sqlQuery(conn, barley_query): first argument is not an open RODBC channel
    Traceback:
    1. sqlQuery(conn, barley_query)
    2. stop("first argument is not an open RODBC channel")</pre>
```

Find the first and last dates for the farm prices data.

#### **Solution 8**

### **Problem 9**

Which crops have ever reached a farm price greater than or equal to \$350 per metric tonne?

```
In [20]: high_price_query<-"SELECT * FROM FARM_PRICES WHERE PricePerMT >350;"
high_price_df<-sqlQuery(conn, high_price_query)
high_price_df

#Canola

Error in sqlQuery(conn, high_price_query): first argument is not an open RODB C channel
    Traceback:

1. sqlQuery(conn, high_price_query)
2. stop("first argument is not an open RODBC channel")</pre>
```

Rank the crop types harvested in Saskatchewan in the year 2000 by their average yield. Which crop performed best?

#### Solution 10

```
In [21]: avg_yield_query<-"SELECT *FROM CROP_DATA WHERE GEO = 'Saskatchewan' AND YEAR L
IKE '2000%';"
    avg_yield_df<-sqlQuery(conn, avg_yield_query)
    avg_yield_df

#BarLey

Error in sqlQuery(conn, avg_yield_query): first argument is not an open RODBC channel
    Traceback:

1. sqlQuery(conn, avg_yield_query)
    2. stop("first argument is not an open RODBC channel")</pre>
```

## **Problem 11**

Rank the crops and geographies by their average yield (KG per hectare) since the year 2000. Which crop and province had the highest average yield since the year 2000?

```
In [22]: highest_yield_query<-"SELECT croptype, GEO FROM CROP_DATA WHERE YEAR >= '2000-
1-1';"
highest_yield_df<-sqlQuery(conn, highest_yield_query)
highest_yield_df

#Barley, Alberta, 2020-12-31, 3980

Error in sqlQuery(conn, highest_yield_query): first argument is not an open R
ODBC channel
Traceback:

1. sqlQuery(conn, highest_yield_query)
2. stop("first argument is not an open RODBC channel")</pre>
```

Use a subquery to determine how much wheat was harvested in Canada in the most recent year of the data.

#### **Solution 12**

```
In [23]: harvestquery <- "SELECT * FROM CROP_DATA WHERE AND CROP_TYPE = 'WHEAT' AND
    YEAR in (SELECT * FROM CROP_DATA WHERE YEAR LIKE '2000%');"
    view<-sqlQuery(conn, harvestquery)
    view
    #35183000

Error in sqlQuery(conn, harvestquery): first argument is not an open RODBC ch
    annel
    Traceback:
    1. sqlQuery(conn, harvestquery)
    2. stop("first argument is not an open RODBC channel")</pre>
```

### **Problem 13**

Use an implicit inner join to calculate the monthly price per metric tonne of Canola grown in Saskatchewan in both Canadian and US dollars. Display the most recent 6 months of the data.

```
In [24]: query<-"SELECT * FROM MONTHLY_FX, FARM_PRICES;"
    view<-sqlQuery(conn,query)
    head(view)</pre>
```

Error in sqlQuery(conn, query): first argument is not an open RODBC channel
Traceback:

- sqlQuery(conn, query)
- 2. stop("first argument is not an open RODBC channel")
